Date : 21/05/2011

Name : KHAIRUL ANSHAR

NRIC : G6074816R

Sex : Male Age : 31

Clinic Visit No : 0611010986

Registration : 11-141-198

Referring Doctor : Yang Tze Yi Steve

Referring Clinic : Internal Medicine Centre - Soc

Performing Centre : Radiology (Raffles Hospital)

CT THORAX

CT of the thorax was performed with IV contrast administration.

There is a moderately large left basal pleural effusion noted, appearing part loculated. Associated partial collapse/consolidation of the left lower lobe is noted. No significant abnormality is seen in the rest of the lung parenchyma. The intra-pulmonary vasculature is normal.

There is no significant mediastinal or axillary adenopathy. The heart and the great arch vessels are unremarkable.

The visualised upper abdominal structures are unremarkable.

COMMENTS

Moderately large left basal pleural effusion appearing part loculated. Associated partial collapse/consolidation of the left lower lobe is noted. No definite pulmonary mass or nodule is noted.
